Annual Drinking Water Quality Report

For

Pleasant Grove City

Pleasant Grove City is pleased to present to you this year's Annual Drinking Water Quality Report. This report is designed to inform you about the quality of the water and services we deliver to you every day. Our constant goal is to provide you with a safe and dependable supply of drinking water. We want you to understand the efforts we make to continually improve the water treatment process and how we protect our water resources. We are committed to ensuring the quality of your water. Our water sources are *Battle Creek Springs, Blue Creek Springs, Lost Springs, Hangman Springs, Battle Creek Well, Anderson Well, Monson Well, Grove Creek Well, Brimley Well, Wade Springs, Ekins Well, Gibson Well Atwood Well, Adams Well and Petersen Well. All of these sources are ground water.*

We're pleased to report that our drinking water meets Federal and State requirements!

This report shows our water quality and what it means to you, our customer.

If you have any questions about this report or concerning your water utility, please contact *Drew Hoffman or Jason Poulson at 801-785-2941*. We want our valued customers to be informed about their water utility. If you want to learn more, please attend any of our regularly scheduled City Council meetings. *They are held on the first and third Tuesday of every month at 6:00 p.m. in the City Council Chambers.*

Pleasant Grove has a Drinking Water Source Protection Plan that is available for review. It provides more information such as potential sources of contamination and our source protection areas. It has been determined that we have a **medium** susceptible level to potential sources of contamination because the wells have **roads, homes, and parks around them**. We have developed management practices that will assure our sources will not become subject to contamination from outside sources. If you have any questions regarding source protection, contact the office to review our source protection plan.

Pleasant Grove City routinely monitors for constituents in our drinking water in accordance with the Federal and Utah State laws. The following table shows the results of our monitoring for the period of January 1, 2022 to December 31, 2022.

CONSTITUENT TABLE

CONTAMINATE	VIOLATION	LEVEL DETECTED	UNIT	MCLG	MCL	DATE SAMPLED	LIKELY SOURCES OF CONTAMINATION
MICROBIOLOGICAL CONTAMINANTS							
Total Coliform Bacteria	N	ND	present	0	5% of monthly samples	Monthly	Naturally present in the environment / The city meets all state requirements for remediation.
RADIOACTIVE CONTAMINANTS							
Alpha emitters	N	0.2 ± .98	pCi/L	0	15	2022	Erosion of natural deposits
Beta/photon emitters	N	1 ± 1.2	pCi/L	0	50	2022	Decay of natural and man-made deposits.
Radium 228	N	0.18 ± 0.38	pCi/L	0	5	2022	Erosion of natural deposits
INORGANIC CONTAMINANTS							
Arsenic	N	ND	ppm	0	10	2021	Erosion of natural deposits; run off from orchards
Barium	N	0.039	ppm	2000	2000	2022	Discharge of drilling wastes; discharge from metal refineries; erosion of natural deposits
Copper 90% results	N	112	ppb	1300	AL=1300	2022	Corrosion of household plumbing systems, erosion of natural deposits
Lead 90% results	N	1.9	ppb	15	AL=15	2022	Corrosion of household plumbing systems, erosion of natural deposits
Fluoride	N	.37 Avg	ppm	4	4	2022	Erosion of natural deposits
Nitrate (as Nitrogen)	N	.53 Avg.	ppm	10	10	2022	Runoff from fertilizer use; leaching from septic tanks, sewage; erosion of natural deposits
Selenium	N	6.7	ppb	50	50	2022	Discharge from petroleum and erosion of natural deposits; discharge from mines.
Sodium	N	24.4	ppm	None set by EPA		2022	Erosion of natural deposits; discharge from refineries and factories; runoff from landfills.
Sulfate	N	128	ppm	1000	1000	2022	Erosion of natural deposits; runoff from landfills, runoff from cropland
TDS (Total Dissolved Solids)	N	240 Avg	ppm	1000	1000	2022	Erosion of natural deposits
Turbidity	N	0.18	NTU	NA	5	2022	Soil runoff
Manganese	N	ND	ppm	NA	NA	2021	Mineral naturally occurring in the environment
DISINFECTION BY-PRODUCTS							
TTHM	N	.9	ppb	0	80	2022	Byproduct of water disinfection
HAA5	N	ND	ppb	N/A	N/A	2022	Byproduct of water disinfection

TABLE DEFINITIONS

Non-Detects (ND) - laboratory analysis indicates that the constituent is not present.

ND/Low - High - For water systems that have multiple sources of water, the Utah Division of Drinking Water has given water systems the option of listing the test results of the constituents in one table, instead of multiple tables. To accomplish this, the lowest and highest values detected in the multiple sources are recorded in the same space in the report table.

Parts Per Million (ppm) or Milligrams per liter (mg/l) - one part per million corresponds to one minute in two years or a single penny in \$10,000.

Parts Per Billion (ppb) or Micrograms per liter (ug/l) – one part per billion corresponds to one minute in 2,000 years or a single penny in \$ 10,000,000

Nephelometric Turbidity Unit (NTU) - nephelometric turbidity unit is a measure of the clarity of water. Turbidity in excess of 5 NTU is just noticeable to the average person.

Maximum contaminant level (MCL) - The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the maximum contaminant level goals as feasible using the best available treatment technology.

Maximum contaminant level goal (MCLG) - The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Maximum Residual Disinfectant Level (MRDL) - The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.

Maximum Residual Disinfectant Level Goal (MRDLG) - The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

Action level (AL) - The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

Date- Because of required sampling time frames i.e. yearly, 3 years, 4 years and 6 years, sampling dates may seem out of date.

All sources of drinking water are subject to potential contamination by constituents that are naturally occurring or are manmade. Those constituents can be microbes, organic or inorganic chemicals, or radioactive materials. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline at 1-800-426-4791.

All drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. MCL's are set at very stringent levels. To understand the possible health effects described for many regulated constituents, a person would have to drink 2 liters of water every day at the MCL level for a lifetime to have a one-in-a-million chance of having the described health effect.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by cryptosporidium and other microbiological contaminants are available from the Safe Drinking Water Hotline (800-426-4791).

In our continuing efforts to maintain a safe and dependable water supply it may be necessary to make improvements in your water system. The costs of these improvements may be reflected in the rate structure. Rate adjustments may be necessary in order to address these improvements. If you have any questions, feel free to call our office at (801)785-2941.

Currently the city water system has 4 deficiencies with the State Department of Drinking Water. We are actively working to correct these issues and expect them to be resolved soon.

Location	Deficiency	Severity	Date Identified	Comments
Gibson Well	Chlorine Room	Minimal	8/24/2022	This is a temporary addition, and the chlorine room hasn't been built yet
Gibson Well	Lack separate switches for fan and lights near chlorine room entrance	Minimal	8/24/2022	This is a temporary addition, and the chlorine room hasn't been built yet
Gibson Well	Chlorine room exhaust fan suction not located near floor	Minimal	8/24/2022	This is a temporary addition, and the chlorine room hasn't been built yet
Battle Creek Tank #2	Storage tank roof or sidewalls show signs of mild or moderate deterioration	Minimal	10/05/2011
