

PLEASE DO YOUR PART IN CONSERVING OUR WATER RESOURCES!

At our current level of outdoor water usage we are projected to run out of secondary water resources by mid-September. To continue to have water throughout the season, it is imperative that we begin conserving NOW.

✓ Reduce your watering times:
Option one: Reduce your watering by 30%. For example, if currently watering for 20 minutes, change it to 14 minutes.
Option two: Keep the same watering times, but only water twice a week.
Odd house numbers: Mon. & Fri. • Even house numbers: Tues. & Sun.

✓ Adjust sprinkler heads not to overspray on concrete/non-irrigation surfaces.

✓ Delay installation of new sod or seed. Wait until next spring.

✓ When possible, please avoid watering in the heat of the day and during windy conditions.

Enforcement actions on those wasting water will be emphasized for the remainder of this irrigation season.
